

“

“Once you start understanding that there is offense and defense and you add it into the field of metas it becomes easier to approach games.”

2. UNDERSTANDING THE META

Understanding the meta is the hardest part. Your perception of the game is all about putting the pieces together and finding the best strategic mix of offence, defense and resources to round out your game play.

BALANCED APPROACH

Getting a solid grasp of any given meta begins with balancing your offensive and defensive strategies.

- It will become easier to approach the games that you play as well as new games.

APPLYING PREVIOUS METAS

You don't want to throw away what you learn, you need to stay up to date with the current times, players and strategies in order to continue manipulating the meta

Exercise: Identify the metas that you have observed in previous games you have played and figure out where you can implement them into the new games you are playing.

THE EVOLVING META

As new games are released and new metas are established, be aware that it will always evolve as experimentation and competition increases.

- Only 30% of one game will transition to the next iteration - new features, movement, knowledge, maps, etc
- 70% watching others play, seeing how characters are better than others. add all of them together and adapt and evolve your meta
